

AMS *-For a Better Health-*
Activated Mineral Solution

PROTOCOL 1000 for Animals

www.activatedmineralsolution.com

info@activatedmineralsolution.com

Formula for Animals

1 Drop per **4** Kilos of Body weight = maximum Amount (for the beginning)

Bodyweight divided by **4** = max. Dosis

- **Start** of with **1** drop of activated AMS each hour, for **8** hours a day, for **3**
Weeks. -

The way you accomplish activation:

First, add your number of NaClO₂ drops to a clean dry glass, then activate as follows: add a drop of 50% citric acid for each drop of NaClO₂ in the glass, and then shake or swirl to mix, wait 30 seconds, add 1/2 to 1 glass of water or juice and then give to the Animal to drink.

Do not use orange juice. Do not use juices with added vitamin C or ascorbic acid added. Do not use concentrated juices that must have water added to them. Fresh juices are best.

But if you don't want to make up a single dose each hour, you can make 8 doses in the morning, and keep the solution in a closed container all day. Just follow the above instructions multiplying all the figures by 8 and then put that liquid in a closed container. Take 1/8th of it each hour. Don't worry the AMS will last hours longer than is needed, so long as you keep the lid on tight.

Now, these are the important instructions you must be sure to follow:

*You must not make the Animal sicker than it already is: Do not cause the Animal a get lot of nausea, or pain, or diarrhea. When you notice any of these symptoms coming on use less AMS.

*Try not to stop using AMS, just use less. Go from 2 drops an hour of activated AMS to one drop an hour. Or if you are already give only one drop an hour, then give 1/2 drop and hour, or even 1/4 drop an hour. Do not cause the Animal to have diarrhea if you can avoid it by giving less AMS.

*Pain, diarrhea, nausea and other discomforts cause loss of energy, which in turn causes slower healing and slower recovery. On the other hand try to increase the amount of drops you are giving until you are giving 3 drops an hour, but do not go over 3 drops an hour. CONTINUE THIS UNTIL THE ANIMAL IS WELL.

Here is how you carry your 8 hour dose with you instead of having to activate it hourly.

Take a liter bottle, divide it into 8 equal parts. Mix 24 drops of NaClO₂ and 24 drops of 50% citric acid. Swirl or mix and wait for 30 seconds. Fill the bottle with water or Juice (without Vitamin C or ascorbic acid) and you will have a 3 drops of AMS activated per line taken hourly.

NOTE: This activated bottle of AMS will last up to 5 days in the fridge. We found that as long as you activate AMS and does not come into contact with a pathogen the chlorine dioxide is not released.
